

Identify the direction of opening, vertex, axis of symmetry, p value, focus, and directrix of each.

$$1) y + 1 = -\frac{1}{8}(x - 5)^2$$

Opens: down

$$\frac{-1}{8} = \frac{1}{4p}$$

vertex: (5, -1)

$$-4p = 8$$

axis of symmetry: $x = 5$

$$p = -2$$

p = -2

focus: (5, -3)

directrix: $y = 1$

Graph the parabola for the following equations.

$$2) \sqrt{x+5} = \sqrt{(y-2)^2}$$

$$\pm \sqrt{x+5} = y - 2$$

$$2 \pm \sqrt{x+5} = y$$

$$2 + \sqrt{x+5} \quad 2 - \sqrt{x+5}$$

$$\begin{array}{|c|c|} \hline x & y \\ \hline -5 & 2 \\ \hline \end{array}$$

$$\begin{array}{|c|c|} \hline x & y \\ \hline -5 & 2 \\ \hline \end{array}$$

$$\begin{array}{|c|c|} \hline x & y \\ \hline -4 & 3 \\ \hline \end{array}$$

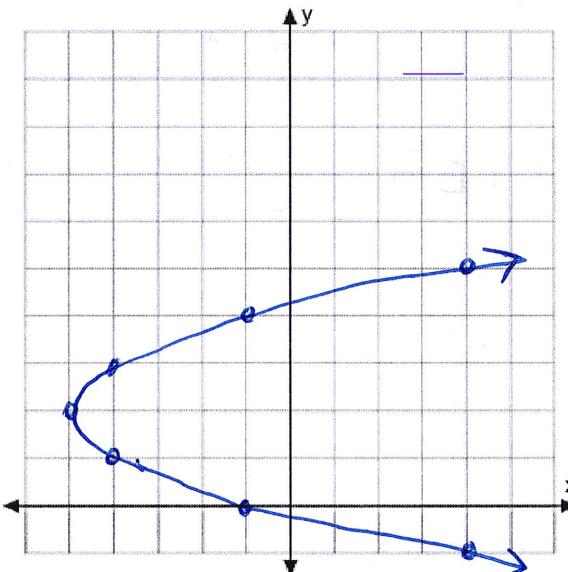

$$\begin{array}{|c|c|} \hline x & y \\ \hline -4 & 1 \\ \hline \end{array}$$

$$\begin{array}{|c|c|} \hline x & y \\ \hline -1 & 4 \\ \hline \end{array}$$

$$\begin{array}{|c|c|} \hline x & y \\ \hline -1 & 0 \\ \hline \end{array}$$

$$\begin{array}{|c|c|} \hline x & y \\ \hline 4 & 5 \\ \hline \end{array}$$

$$\begin{array}{|c|c|} \hline x & y \\ \hline 4 & -1 \\ \hline \end{array}$$

Find the equation of the parabola given the focus and directrix.

3) Focus : (2, 4) and Directrix : $y = 0$

$$F(2, 4) \quad D(2, 0)$$

$$V = \left(\frac{2+2}{2}, \frac{4+0}{2} \right) = (2, 2)$$

$$P = F_y - V_y = 4 - 2 = 2$$

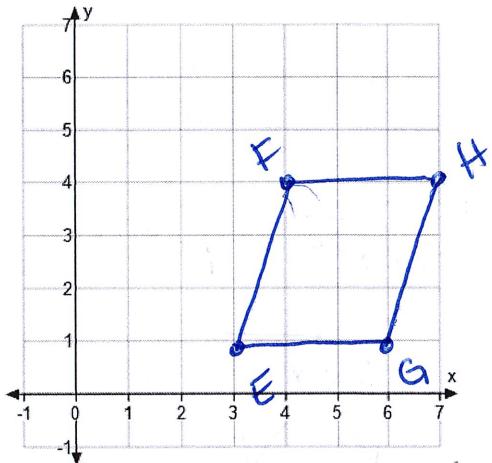

Equation: $y - 2 = \frac{1}{8}(x - 2)^2$

Plot points E = (3, 1), F = (4, 4), G = (6, 1) and H = (7, 4).

Slope

$\overline{EF} \parallel \overline{GH}$ because they have the same slope of 3.

$\overline{FH} \parallel \overline{EG}$ because they have the same slope of 0.

4) What specialized geometric figure is quadrilateral EFHG? Support your answer mathematically.

Distance

$$EG = 3$$

$$EP = \sqrt{3^2 + 1^2} = \sqrt{10}$$

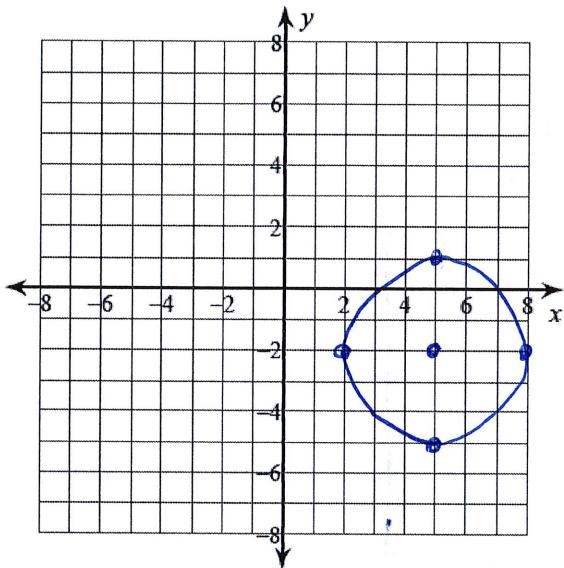

} Not the same! So it is NOT a rhombus.

The quadrilateral EFHG is a parallelogram.

Identify the center and radius of each. Then sketch the graph.

5) $(x - 5)^2 + (y + 2)^2 = 9$

Center: (5, -2)

Radius: 3

6) Write the equation of a circle with a center at (-3, 0) and passes through the point (1, 3).

$$\text{distance} = \sqrt{(-3-1)^2 + (0-3)^2} = \sqrt{25} = 5 = r$$

$$\boxed{(x+3)^2 + y^2 = 25} \quad \text{or} \quad \boxed{(x+3)^2 + (y+0)^2 = 25}$$

7) Given the equation of circle Z, $(x + 8)^2 + (y - 9)^2 = 100$, determine if the point (-2, 0) lies on the circle Z.

$$(-2+8)^2 + (0-9)^2 \stackrel{?}{=} 100$$

$$117 \neq 100$$

$$117 > 100$$

No! It lies

outside the
circle and not
on the circle.

8) Given the equation of circle N, $(x - 4)^2 + (y + 3)^2 = 1$, determine if the point (4, -2) lies on the circle N.

$$(4-4)^2 + (-2+3)^2 \stackrel{?}{=} 1$$

$$1 = 1$$

Yes! It lies
on the circle

Find the center and radius of the given equation.

9) $x^2 + y^2 + 2x - 4y = 5$

$$\cancel{x^2} + 2x + \cancel{y^2} - 4y = 5$$

$$\underbrace{x^2 + 2x + \underline{1}}_{\text{Complete square}} + \underbrace{y^2 - 4y + \underline{4}}_{\text{Complete square}} = 5 + \underline{1} + \underline{4}$$

$$(x+1)^2 + (y-2)^2 = 10$$

$$\text{Center} = (-1, 2)$$

$$\text{Radius} = \sqrt{10}$$
